so has this already been arranged for bundling into RunInUAE through AmiUpdate with Ludicrous speed fully enabled and zero configuration required?

I think you are jumping the gun a bit: There are still issues with this version of E-UAE that the Amigfx version doesn't have (e.g. sound skipping on Sam440), not to mention JIT compatibility still isn't perfect (e.g. WHDLoad Stunt Car Racer has corrupted graphics) & even then JIT may cause issues (e.g. WHDLoad Starglider 1 & 2 run way to fast with the speed 'fully' enabled), so it's hard to say what the best configuration will be... or even if JIT should be enabled by default.

I am at least considering these issues though.
