looks like your using a really old web browser with out CSS support.

Yes I am, It's really old (exactly a month today) but it does not:

Support CSS

Crash or lockup the system

Take ages to load pages

Scroll pages slowly

Lose Zoom factor when switching tabs and back

Randomly decide to draw a page differently

Display popups and adverts

overwrite existing downloads when 'start downloads automatically' is turned on.

Make it incredibly difficult to remove fastlinks.

And finally unless you've ported it I cannot run chrome on OS4 (Amiga only here). 😞

Yes I've seen that site, No I've nothing to run it on...
