The hardware used for this capture is: AverMedia Game Broadcaster HD

PLEASE NOTE: I rarely answer this question because it's possible to spend time and money setting this up and finding out it doesn't work well. I've experimented with different hardware and software configurations so please understand if someone tries it and it doesn't work, I can't help you.

My current Host machine is Windows7 64-bit, AMD A8-6600K-APU 3.9 Ghz quad core with Radeon HD, 7200 rpm Western Digital drive, external video splitter and sometimes an external video transciever.
