SMTube : new version on OS4Depot

Author: : zzd10h

Date: : 2014/6/2 6:36:44

URL:

SMTube 2.1 svn6227

*** In short, added some switches to call SMTube from CLI**

* [AmigaOS4] Fixed the start from CLI by lowering the Stack (???)

* [AmigaOS4] Now, options from CLI are working

APPDIR:SMTube "search string" -lang xx

allows to call SMTube from CLI with a search string and to specify a different language.

ex : **APPDIR:SMTube "AmigaOS X1000" -lang fr**

* [AmigaOS4] When started by CLI, tabs changes are disabled because it made a CPU loop (???)

* Added a new CLI switch "-url <http://www.youtube.com/watch?v=XXXXXXXX>" to directly download a video by his url.

ex : **APPDIR:SMTube -url <http://www.youtube.com/watch?v=XXXXXXXX>**

Unfortunately, on AmigaOS, a new SMTube instance will be started for each "-url xxx" request.

The QtSingleApplication.isRunning() function doesn't seems to work to detect if another instance is still running.
(Alfkill if you are around ?)
