If I replace

```
QMessageBox::warning(this, tr("Error"), error);
```

by

```
QMessageBox::warning(this, tr("Error"),error + " " ) ;
```

it works (notices the more than 50 space character after "error + "

If I replace "error" by a constant string, it's the same, this QMessageBox want a string that is at least more than xx characters (too lazy to count)

this will always make the string 50 chars long.

```
QMessageBox::warning(this, tr("Error"),error.leftJustified(50, ' '));
```

<http://qt-project.org/doc/qt-4.8/qstring.html#leftJustified>

I'm assuming error object is declared using QString class.
