Right, I have the dev package.

But I just installed the minimal package in another location and it seems that the "bin" drawer is missing. You just have the "bin.info"

```
5/0.DH5_JXF4:Qt-4.7> sf
```

```
Displaying files in Qt-4.7
```

```
Aujourd'hui 12h46 Dir      demos

```

Strangly, the "bin" is added to the user-startup during installation of the minimal package.

Does it work if you remove the "path Qt:bin ADD" in your User-Startup ?

Are you able to use Qt programs ?

It should because, it seems that there are only binaries for dev inside the Qt:bin drawer.

Or contact Alkill asking to update his minimal package...

Edit : tested by commenting "path Qt:bin ADD" and rebooted.

SMTube works fine...
