tommysammy notified me about some problems with the X1000 builds I did. Anyone who got an e-mail before will receive another one very soon.

Edit: Emails sent. It's related to the issue I had with ffmpeg. I think it's the binutils I have causing an issue at the linking stage if certain flags are used (altivec). Altivec flags aren't needed to build e-uae but I used them as an experiment.

Edit 2: Probably not binutils but libgcc.a?
