Just a quick test as I don't use UAE a lot.

I have 2 setup WB31 and WB39.

With standard UAE and X1000 one, I use the same UAE.rc config

With standard UAE

WB31 & WB39 are windowed and nice colors/resolution (UAEGFX 1024x768 32bits), full-screen works fine.

With standard UAE

WB31 & WB39 are full-screen with white big borders and bad colors/resolution (PAL Low resolution), no way to switch fullscreen/windowed with CTRL-ALT-S keys

Have the rc files have to be modified with this new version ?

Thank you
