@TSK

thank you, I had read the ReadMe, especially that :

"You can reuse the same configuration files, HD image files, prepared folders that were already working with the previous E-UAE version."

Now, I will try that :

However, for testing the JIT implementation please make sure you set up the configuration exactly as listed below:

```
cpu_speed=max
cpu_type=68020 (or 68EC020, 68040, see Known issues)
cpu_compatible=false
cpu_cycle_exact=false
blitter_cycle_exact=false
comp_optimize=true
cachesize=8192 (or higher)
comp_constjump=yes
comp_trustbyte=indirect (see Known issues)
comp_trustword=indirect
comp_trustlong=indirect
```
