Yes some settings need to be changed to use the JIT version, this is the standard config according to the included readme

Quote:

```
cpu_speed=max  
cpu_type=68020 (or 68EC020, 68040, see Known issues)  
cpu_compatible=false  
cpu_cycle_exact=false  
blitter_cycle_exact=false  
comp_optimize=true  
cachesize=8192 (or higher)  
comp_constjump=yes  
comp_trustbyte=indirect (see Known issues)  
comp_trustword=indirect  
comp_trustlong=indirect
```

But check the UAE JIT's readme for more info, actually i'm using the new RunInUAE R8, and of course once released you will found an already configured JIT-enabled configuration
