I edited the post to add the link to the ticket. It might be looked at in the future. I know of one person who was going to look into it (he mainly does stuff for MOS).

There's also this ticket: <http://sourceforge.net/p/euaepcjit/tickets/54/> but doesn't directly relate to P96, although could help.

You've got my own X1000 SDL build, right? I don't know if I have your email, but maybe someone sent it to you. Check your PMs.
