Do you have a more direct link? I downloaded the sources and browsed around, but couldn't find any examples, not any interpreter source of interest (I have to admit, I was very lazy).

Currently I'm just looking for input on how one would want to call Java from ARexx, not so much how to solve it technically (although suggestions based on what is possible would be welcome).

Perhaps my aim is a bit high. I should perhaps just settle with a simple sort of Java-bean based approach, to enable simple ARexx communication, possibly requiring some Java code to be written, rather than fully utilise Java from ARexx.
