A native SQSH decoder would be cool! (used for protracker modules).

Slightly off-topic, but I've written (or, more accurately, ported) a [native xpkSQSH.library](#) (as I said earlier, writing an XFD slave for an XPK format could easily cause problems)

Doesn't support packing, only unpacking. I think there are better options for packing these days anyway! (but if somebody has working SQSH packing code, I'll add it)

Unpacking appears to be the same speed as the 68k version under JIT, but that might just be me! Let me know if you think it's quicker or not.
