Your using "-lavdopts skiploopfilter=none", this setting is slower, but produce better picture quality.
Try "-lavdopts skiploopfilter=all" it should run faster.

Rapport have not been frequent from the AmigaOS4 Sam460 Beta testers, I don't know if you can or not play 720p on Sam460, but lets say a strongly doubt it. I have not gotten the feed back I need to say it does or does not yet.

Your version of mplayer is old, there are meany things different between the new mplayer and the mplayer your using. There have also been additional changes in AmigaOS4.1 Final.

So for now lets just wait for AmigaOS4.1 final, and we will know then.
