I think its part of AmigaOS4.1 as standard, its just not enabled by default, copy the http device from devs:storage to devs:dosdrivers this will enable it.

That's the URL DosDriver, That won't really solve the problem, it just detects a url in a filepath and asks you what program you want to handle it with.

Nothing is stopping anyone adding mplayer to url preferences though.

@ggw

I've checked out the smtube play video rexx script and found this:

```
/* optimisations from K-L (compatible with MUI-MPlayer Overlay and SDL-MPlayer) */  
/*MPLAYER_OPTIONS = "-cache 8192 -cache-min 20 -autoq 100 -autosync 30" */  
  
/* optimisations from K-L (compatible with MUI-MPlayer NON-Overlay) */  
/*MPLAYER_OPTIONS = "-vo cgx_wpa -cache-min 20 -autoq 100 -autosync 30" */  
  
/* for SDL-MPlayer 4.2.4 complaining about a HTTP: assign at startup */  
ADDRESS COMMAND "ASSIGN http: RAM:"
```

Possibly assigning http: to ram: may fix your problem.

Although if you're just streaming audio I'd use AmigaAMP3.
