Dopus5 Format command

URL:

A user (tekimage) reported disk corruption when the "make bootable" option was left selected when formatting a disk and suggested disabling that option as a solution. That's possible but after examining the code I think it would be safer for all OS4 users to have the Dopus5 format command open the OS4 Format command instead of the old internal one. Are there any objections to either of those options?? Disk corruption is a serious issue that needs to be fixed.
