Any chance of looking at the filter buffers? eg. doing womething like:

```
set show *. (jp*g|png|gif|tif|bmp|iff)
```

produces an error requester saying the buffer is too small.

Icon positioning on the desktop doesn't work with big screen sizes either. it puts icons down to around 700 pixels then thinks it's run out of room and sticks them in the top left. but I've lived with this one for a long time so can wait, filters would be good though.
