a) (and I'm sure I've asked this before) Why are you using the AmiCygrix version of NetSurf rather than the native OS4 one?

b) That's normal. I'm not sure why there's no images, it probably needs raising [on the bug tracker](#). It's been like that for as long as I can remember (so at least since Friday afternoon - Ed)

c) Copy and paste from the OS4 native frontend works fine.

d) YouTube videos do not play directly in NetSurf, it doesn't support HTML5 video or Flash.

e) If you use the OS4 version you can select Get Video from the ARexx menu and if it's installed it will play the video for you (well, it used to, but the version I have isn't working and it seems to have been removed from Aminet - there are other solutions that do similar things but you'll need to modify my ARexx script to call them)
