Will do. I think I was starting to notice that might work.

Yesterday I was having a problem where I could copy what I wanted into other windows, e.g. the one I was copying out of, but I kept getting a previous copy pasting into the desired window!

And today, it refuses to copy Japanese, converting it to "?????", just like Clipboards, so I'll give restart a try. (After a while. I'm almost afraid even to click "Submit" in case it would crash me in the middle of downloading qt.tar.gz. I have a feeling that Odyssey is behind many of my machine crashes.)
