I don't know what dependencies DOpus5 has, but keep these points in mind:

- 1) Final Edition should be installed on a clean (formatted) partition, so if you are re-using your existing Sys: partition, and DOpus is there, or DOpus libraries, preferences, etc., they would be erased.
- 2) If DOpus5 is installed on a partition with JXFS filesystem, that filesystem is not supported and should be re-created using FFS or SFS.
- 3) As a general rule of course, backup anything you don't want to risk losing.
