The Environment settings are backed up when Dopus5 starts. The settings in the Buttons directory are backed up when saved. If you have a separate button bank for FTP, that's the only FTP setting that should be affected by the latest Dopus5 changes. Are the FTP sites missing when you start Dopus5? Are they still missing if you enter new ones, save the FTP config, quit dopus5 and restart it?

You can't mix the new binaries with old ones. You need to use new modules, library and program.
