Oh, you make me so sad with this news! I left a post on that forum as well. I mightily appreciate smTube on my X1000. I have it set to stream videos at 360 but save them as 720, and I am all the time saving videos to watch at my leisure or often as I want on my X1000 with mplayer.

There are some tutorial videos and music videos I want, so saving like mad now, while this thing still works.
