URL:

Solved pixman compilation by adding `#include <limits.h>` in the `pixman-utils.c` file

Now i have all the libraries of pixman compiled.

Now, trying to configure cairo with the command line in the post above , i get the error:

checking whether cairo's image surface backend feature could be enabled... no (requires pixman-1 >= 0.30.0

<http://cairographics.org/releases/>)

configure: error: mandatory image surface backend feature could not be enabled

configure: WARNING: cache variable `cairo_cv_warn_maybe` contains a newline

Cairo needs pixman and can't find it.

Where the pixman library should be copied in order to make those libraries visible by cairo configure?
