Did you install pixman or just compile it?

If you don't know which files to copy and where you can use "gmake install" to do this.

Also you should leave out the "--host=ppc-amigaos" in configure command line if you're not cross-compiling.

You may also have to set PKG_CONFIG_PATH so that cairo can detect your pixman installation:

```
setenv SAVE PKG_CONFIG_PATH /SDK/local/newlib/lib/pkgconfig
```
