@salass00

this is my Makefile for a cairo program:

```
CFLAGS = -I/SDK/local/common/include/cairo -ggdb -lincludeCXXFLAGS = $(CFLAGS)
```

```
LDFLAGS = -use-dynld -cpu=440
```

```
LIBS = -L/SDK/local/newlib/lib -lcairo -lfreetype -lfontconfig -lpixman-1 -lpng12 -lz -lexpat -lpthread -lauto
```

now in this path "SDK/local/common/include/cairo" the include file still hold (2008)

while in "/SDK/local/newlib/include/" i have the latest include file after the gmake install.

How should i proceed? Should i copy this new file to "SDK/local/common/include/cairo"?

Moreover, the cairo-ps.h, cairo-ft.h, cairo-pdf.h and cairo-svg have been not generated in "/SDK/local/newlib/include/"

thank you in advance
