now in this path "SDK/local/common/include/cairo" the include file still hold (2008)

while in "/SDK/local/newlib/include/" i have the latest include file after the gmake install.

How should i proceed? Should i copy this new file to "SDK/local/common/include/cairo"?

If you're not going to use old cairo build then just delete the "SDK:local/common/include/cairo" directory and its contents.
