Hi guys!

I started this new topic because I have problem with Vice and the Speed-link Competition Pro USB..

The joypad works fine with all games I tested but I was never able to use it with Vice (version 2.1 and 2.2). With Vice the Speed-link has a strange behaviour, the main character of any video games I try to play keeps going on the left part of the screen.. I suspect there is a problem with the x/y-axis under Vice..

Is there anyone that can try it? and maybe help me to find a solution? it is a pity that I cannot use it with the Amiga..
