I'll check it out, but first I want to fix Vice. I already fixed a quite a few issues (including the ones found by Spirantho), which was enough to get it up and running. I still have broken sound, and low framerate, unless I bring up the menu a few times. I may or may not be able to fix this, but I'll try to get my changes into the official repo, so others can have a look at it too.
