Getting AmiCynix back correctly

URL:

I've been using AmiCynix for some years, mainly for Usenet, but I recently trashed my OS4 hard drive with no recent backups, and I'm slowly putting OS4.1FE and the old user partitions back together on my X1000.

I just reinstalled AmiCynix, Base and Tools, but when I boot it I find no e-mail program at all! What am I doing wrong this time?

It may be a moot point. I haven't been able to reconnect YAM with my ISP, so I'll probably have the same trouble with AmiCynix (in fact I have found that the browser does not connect), but just in case I overcome that major difficulty...
