6-700MB

You mean 6-7 , or 600-700 , or how much you have left when lockup happens ? Imho 700 its is not "low memory", it is probably some problems with x1000, where 2gb installed, but after 1.4 or 1.3 filled up everything start to suck up ?:)

Is it on dopus5.90, or on current revision ?

In latest revision (1079), Xenic add fixes for lowmemory handler, try with it, will it works or not. Also try without , will it the same, or things will be different.
