Interesting difference in decoding results between AmigaOS 4.1 and MorphOS on the Sam460ex .

The MorphOS version decodes 2.36x faster than the AmigaOS 4.1 version. What could cause such a large difference ?

Different version avcodec (FFMPEG)

Older FFMPEG is faster on operating systems with no hardware accelerated video decoding, but support fewer new video formats.

I suggest you take a look at codec version when comparing results, should be present in console output.

Try different version of MPlayer to see what is best.
