URL:

It should be possible to use `SendData(id, data$)` to send a post request, since POST data is part of the request body.

You should be able to send something like this:

```
POST /path/script.cgi HTTP/1.0
From: xxxyyyzzz
User-Agent: HTTPTool/1.0
Content-Type: application/x-www-form-urlencoded
Content-Length: 32
```

```
var1=something&var2=something
```

At least that is how I use REST webservices in Delphi, granted Delphi and Hollywood is not the same, but I would think the approach should be the same.
